CONTENTS

What is inside

20 chapters, written for SEO in 2027. Numbers in purple, like this[1], link to the sources on the last pages.

01	How to use this SEO e-book	Start here
02	How search works in 2027	The new search results page
03	Keyword research that finds buyers	Search demand and intent
04	Technical SEO: make every page findable	Crawl, index, speed
05	On-page SEO and helpful content	Pages that rank and get quoted
06	Links, mentions and digital PR	Authority
07	Content strategy and topic clusters	Plan content that compounds
08	AI search: AEO and GEO for SEO teams	Get cited by AI
09	Local SEO	Maps, reviews and AI recommendations
10	Ecommerce SEO	Category and product pages
11	Structured data	Help machines understand you
12	Site migrations without losing traffic	Redesigns and domain moves
13	Traffic drops and Google updates	Diagnose before you react
14	Measuring SEO	Reports that drive decisions
15	Your 90-day SEO plan	From plan to progress
16	15 SEO mistakes to avoid in 2027	Save months of wasted work
17	The SEO master checklist	Print this page
18	SEO glossary	Plain-English definitions
19	About the author and next steps	Work with Mandeep
20	Sources	Every statistic, linked

01

START HERE

How to use this SEO e-book

SEO in 2027 is still about one thing: being the best answer for the people you want as customers. What has changed is where that answer appears. It might be a blue link, a map listing, an AI Overview, a ChatGPT reply or a Perplexity citation. This e-book shows you how to win in all of them.

I have worked in search for more than 22 years and founded SEO Discovery in 2004. Our team has run SEO for local businesses, ecommerce stores and brands such as ACKO, Mercedes-Benz, Toyota and ELLE. The advice here comes from that work, and every statistic is linked to its original source at the end.

Who this guide is for

- Business owners who want more customers from Google and AI search
- Marketers who need a clear SEO plan for 2027
- Content writers and developers who want to know what actually matters
- Agencies and freelancers looking for a complete checklist

How the guide is organised

Chapters	Topic
2 and 3	How search works now, and keyword research that finds buyers
4 to 7	Technical SEO, on-page content, links and topic clusters
8 to 11	AI search, local SEO, ecommerce SEO and structured data
12 to 14	Site migrations, traffic drops and measuring SEO
15 to 18	A 90-day SEO plan, 15 mistakes to avoid, the master checklist and a glossary

> **Fast start.** If you only have an hour, read chapter 2, run the technical checks in chapter 4 and pick three tasks from the 90-day plan in chapter 15.

02

THE NEW SEARCH RESULTS PAGE

How search works in 2027

Google still crawls, indexes and ranks pages. But the results page now often starts with an AI-generated answer, and many searches start in AI tools instead of Google.

2B+
monthly users of Google AI Overviews in 200+ countries and territories[5]

100M+
monthly users of Google AI Mode in the US and India[5]

800M+
weekly ChatGPT users[25]

Fewer clicks, higher stakes

When a Google AI summary appeared, users clicked a result on 8% of visits, against 15% without one[3]. Ahrefs measured a 58% lower average click-through rate for the top-ranking page when an AI Overview is shown (300,000 keywords, December 2025)[4].

Source: Pew Research Center[3]

The three steps Google still follows

1. **Crawling.** Googlebot discovers pages through links and sitemaps.
2. **Indexing.** Google decides whether to store a page and what it is about. Google says not every URL on a site is expected to be indexed[13].
3. **Ranking and answering.** Google picks the most helpful pages for each query, and AI features draw on those same indexed pages.

Google says there are no extra requirements to appear in AI Overviews or AI Mode beyond being indexed and eligible to show in Search[12]. Strong classic SEO is therefore the entry ticket to AI visibility.

> **What it means.** Ranking is no longer the finish line. Your goal is to be the source that results, AI answers and buyers all trust, and to make every click that does come count.

03

SEARCH DEMAND AND INTENT

Keyword research that finds buyers

Good SEO starts with the words your customers actually use. Demand is spread across millions of specific searches: 94.74% of keywords get 10 or fewer searches a month, and only 0.0008% get more than 100,000[1].

Long tail wins

Specific searches like "emergency plumber open now in Leeds" convert far better than broad terms.

New every day

About 15% of Google queries every day are new, as Google repeated in 2025[2].

Hidden demand

46.08% of clicks in Search Console go to hidden, unreported terms[1].

The four kinds of intent

Intent	Example	Best page type
Transactional	buy running shoes size 10	Product or category page
Commercial	best CRM for small business	Comparison or review page
Informational	how to fix a leaking tap	Guide or how-to article
Local	dentist near me	Location page and Google Business Profile

A simple research process

1. List what you sell and the problems it solves, in customer language.
2. Collect ideas from Google suggestions, People Also Ask, forums, reviews, sales calls and Search Console.
3. Add volume and difficulty from a keyword tool, but do not ignore low-volume terms with clear buying intent.
4. Group keywords that share the same intent. Each group gets exactly one page.
5. Prioritise by business value first, then by realistic difficulty.

> **Keyword map rule.** One page per intent. If two of your pages target the same search, they compete with each other (keyword cannibalisation). Merge them or give each a clearly different purpose.

Your keyword map template

Keyword group	Intent	Target page	Status

04

CRAWL, INDEX, SPEED

Technical SEO: make every page findable

Technical SEO makes sure search engines and AI crawlers can reach, read and understand your pages. If this layer is broken, nothing else works.

Indexing essentials

- Use the Page indexing report in Search Console to see which pages are not indexed and why[13].
- Do not expect every URL to be indexed; Google says that is normal. Focus on the pages that matter[13].
- No action is needed for an alternate page that correctly points its canonical tag to the main version[13].
- A robots.txt block stops crawling, but it does not guarantee a page stays out of the index. Use noindex for pages you want removed[13].
- After fixing an issue and clicking Validate fix, validation typically takes about two weeks, sometimes longer[13].

The technical checklist

Area	What good looks like
Crawlability	Important pages linked internally, in the XML sitemap, not blocked
Indexing	One canonical URL per page; thin and duplicate pages noindexed or merged
Speed and stability	Fast on mobile, minimal layout shift, optimised images
Rendering	Key content visible in the HTML, not only after heavy JavaScript runs
HTTPS and redirects	Secure everywhere; no redirect chains or loops
Mobile	Same content and links on mobile as on desktop
AI crawlers	Search crawlers such as OAI-SearchBot and PerplexityBot not blocked by robots.txt or firewalls

Testing without hurting SEO

If you run A/B tests, Google advises using rel=canonical on test variants pointing to the original, using 302 redirects for redirect tests, and never showing Googlebot different content from users[26].

> **Quick audit.** Search *site:yourdomain.com* in Google, then compare the rough count with the number of pages you actually want indexed. A big gap in either direction is your first clue.

05

PAGES THAT RANK AND GET QUOTED

On-page SEO and helpful content

Average content does not get a chance any more: 96.55% of the 14 billion pages Ahrefs studied get no organic traffic from Google at all[6]. To be in the other 3.45%, a page needs demand, authority and a clear match with intent.

The anatomy of a page that ranks

Title and H1

Lead with the main keyword and the benefit. Keep titles around 50 to 60 characters so they are not cut off.

Answer first

Give a direct answer in the first 40 to 60 words, then expand. This helps readers, snippets and AI answers.

Experience and proof

Real examples, original photos, data, case studies and a named expert with credentials.

Structure

Question-style subheadings, short paragraphs, lists, tables and a clear next step.

On-page checklist

- [x] Unique title tag and meta description for every page
- [x] One H1 that matches the search intent
- [x] Main keyword and close variations used naturally, not stuffed
- [x] Descriptive image file names and alt text
- [x] Internal links to related pages with descriptive anchor text
- [x] Author name, date updated and sources for any statistic
- [x] FAQ section answering real customer questions

E-E-A-T in practice

Google's quality raters look for experience, expertise, authoritativeness and trust. You show these by being specific: who wrote the page, what they have done, what results they achieved and where the facts come from. Vague, generic pages written to fill a keyword rarely survive in 2027.

> **Refresh before you write.** Updating a page already ranking in positions 5 to 15 is usually faster than publishing a new one. Improve the title, answer earlier, add proof and internal links.

06

AUTHORITY

Links, mentions and digital PR

Authority still separates page one from page two. In Backlinko's study of 11.8 million results, the #1 result had 3.8 times more backlinks on average than positions 2 to 10[7].

In AI search, brand mentions matter too. Across 75,000 brands, branded web mentions had a 0.664 correlation with visibility in Google AI Overviews, the strongest factor studied[8].

Ways to earn links that last

Tactic	Why it works
Original data and studies	Journalists and bloggers cite unique numbers
Expert commentary	Quotes in industry articles bring links and brand mentions
Useful free tools and templates	People link to resources that save them time
Partner and supplier pages	Natural, relevant links from businesses you already work with
Local and industry associations	Trusted, relevant listings and sponsorships
Unlinked mentions	Ask sites that already mention you to add a link

What to avoid

- Buying links or joining link schemes, which break Google's spam policies[19]
- Mass low-quality guest posts on unrelated sites
- Hidden links, private blog networks and automated link building

> **Mention audit.** Search your brand name in Google News, Reddit and industry sites. Every place that discusses your category but not your brand is a PR opportunity.

07

PLAN CONTENT THAT COMPOUNDS

Content strategy and topic clusters

Random blog posts rarely build traffic. Topic clusters do: a strong pillar page for a main topic, supported by focused pages that answer every related question and link back to it.

How a topic cluster works

Pillar page

A complete guide or service page for the main topic, targeting the broad keyword.

Cluster pages

Focused pages for each sub-question, comparison or use case, one intent each.

Internal links

Every cluster page links to the pillar and to closely related pages; the pillar links out to all of them.

Example: a cluster for a dental clinic

Page	Type	Intent
Dental implants in [city]	Pillar (service page)	Local and transactional
How much do dental implants cost?	Cluster	Commercial
Implants vs bridges: which is better?	Cluster	Commercial
Dental implant recovery timeline	Cluster	Informational
Are dental implants painful?	Cluster	Informational

Build your editorial calendar

1. Pick three topics that match what you sell and where you can show real expertise.
2. List 8 to 15 questions per topic from customers, sales calls, People Also Ask and AI tools.
3. Publish the pillar first, then one or two cluster pages a week.
4. Update the pillar each time a new cluster page goes live, and refresh everything twice a year.

> **Quality over quantity.** Ten pages that fully answer real questions beat fifty thin posts. Thin, repetitive pages can drag down how search engines see your whole site.

08

GET CITED BY AI

AI search: AEO and GEO for SEO teams

Answer engine optimisation (AEO) helps your content become the direct answer. Generative engine optimisation (GEO) helps AI tools mention and recommend your brand. Both build on SEO.

Where AI answers get their facts

In Yext's study of 6.8 million citations across ChatGPT, Gemini and Perplexity, 86% came from websites, listings and reviews brands manage[9]. Semrush found 80% of Reddit posts cited by AI had fewer than 20 upvotes, so relevance beats popularity[10].

The AEO and GEO checklist

- **Allow search crawlers.** OpenAI uses separate crawlers for search, user actions and training, so you can allow search while opting out of training[11].
- **Write answer-first.** Use the question as the heading and answer it in one or two sentences.
- **State facts plainly.** Prices, services, locations, specs and policies in HTML text.
- **Be consistent.** The same facts on your site, Google Business Profile, LinkedIn and directories.
- **Earn third-party mentions.** Lists, reviews, forums, podcasts and press.
- **Mark it up.** Organization, Product, FAQ and LocalBusiness structured data where it fits.

Answer-first page structure

Section	What to write
Question heading	The exact question, in customer words
Short answer	40 to 60 words that answer directly
Detail	Steps, lists or a table
Proof	Numbers, examples, sources and the named expert
Next step	A link to the service, product or contact page

> **Monthly AI test.** Ask ChatGPT, Gemini, Perplexity and Google AI Mode your top five buyer questions. Record who gets mentioned and which sources are cited. Track it every month.

09

MAPS, REVIEWS AND AI RECOMMENDATIONS

Local SEO

For businesses that serve a local area, the map pack and reviews often bring more customers than anything else. And 45% of US consumers now use ChatGPT or other AI tools for local business recommendations, according to BrightLocal's 2026 survey, while 97% read reviews when choosing a local business[20].

Google Business Profile checklist

- [x] Exact business name, address and phone, matching your website
- [x] The most specific primary category, plus relevant secondary ones
- [x] Services, hours, holiday hours, booking link and attributes complete
- [x] New photos and posts every month
- [x] Every review answered, positive or negative

Play by the rules

Google is strict about fake listings and reviews. In 2025 it reported removing more than 13 million fake Business Profiles and blocking or removing more than 292 million policy-violating reviews[21]. Keyword-stuffed names, virtual offices and bought reviews put your listing at risk.

Location pages that rank

1. One page per city or area you truly serve.
2. Unique content: local projects, photos, staff, testimonials and FAQs.
3. Embedded map, opening hours and clear contact details.
4. LocalBusiness structured data with consistent name, address and phone.

> **Beyond Google.** Claim Apple Business, Bing Places and the directories your industry uses. AI tools pull local facts from many of these sources.

10

CATEGORY AND PRODUCT PAGES

Ecommerce SEO

Online stores face SEO problems that grow with every product: filters that create thousands of URLs, copied supplier descriptions and out-of-stock pages. They also have a big opportunity: Adobe saw a 693.4% rise in traffic to US retail sites from generative AI tools in the 2025 holiday season, and those visitors converted 31% better than other traffic[22].

Priorities for stores

Priority	What to do
Category pages	Add helpful copy, buying guides and FAQs; these usually drive the most organic sales
Faceted navigation	Index only filter combinations with real search demand; keep the rest out of the crawl
Product pages	Unique descriptions for best sellers, specs, real photos and reviews
Out-of-stock items	Keep the page if it returns; redirect permanently discontinued items to the closest alternative
Product structured data	Price, availability, reviews and identifiers, matching what the page shows
Feeds	A clean Merchant Center feed with full titles and attributes

Platform watch-outs

- **Shopify:** product URLs duplicated through collection paths; link to the canonical product URL
- **WooCommerce:** tag and attribute archives indexed by default
- **Magento and custom stores:** layered navigation crawl traps and JavaScript-only content

> **Store quick win.** Write 150 to 300 words of genuinely useful copy for your top ten category pages: who each range is for, how to choose and answers to common questions.

11

HELP MACHINES UNDERSTAND YOU

Structured data

Structured data is code that labels what is on a page, such as a product, a review, a business or an FAQ. Google says it uses structured data to understand content and to enable rich results[14]. AI systems also benefit from clean, consistent facts.

The most useful types

Type	Use it for
Organization	Your brand name, logo, contact details and profiles
LocalBusiness	Address, hours and service area for local businesses
Product and Offer	Price, availability and reviews on product pages
Article and Person	Author, dates and publisher on articles
BreadcrumbList	Site structure shown in results
FAQPage and HowTo	Questions and step-by-step guides (rich results are limited, but the structure still helps)

Rules that keep you safe

- Only mark up content that is visible on the page
- Keep values accurate and up to date, especially prices and stock
- Use JSON-LD, Google's recommended format[14]
- Test with the Rich Results Test and watch the enhancement reports in Search Console
- Connect entities with consistent @id values across your site

> **Start small.** Add Organization and BreadcrumbList sitewide, then Product, Article or LocalBusiness on the page types that matter most to your business.

12

REDESIGNS AND DOMAIN MOVES

Site migrations without losing traffic

Redesigns, platform changes and domain moves are the most common cause of sudden traffic loss. Planned well, they can be close to invisible to Google.

What Google says

- 301 and other permanent redirects do not lose PageRank[15]
- Keep redirects in place for at least a year, so signals can transfer to the new URLs[15]
- Redirect straight to the final URL; avoid chains of more than three hops[15]
- On a medium-sized site, it can take a few weeks or more for Google to show the new URLs instead of the old ones[15]

The migration plan

1. **Benchmark.** Export rankings, traffic, top pages and backlinks before anything changes.
2. **Map every URL.** One-to-one redirects from old to the most relevant new page; never mass-redirect to the homepage.
3. **Keep what ranks.** Carry over content, titles, internal links and structured data from top pages.
4. **Test on staging.** Crawl the new site, check redirects, canonicals and noindex tags.
5. **Launch carefully.** Update sitemaps, use the Change of Address tool for domain moves and monitor Search Console daily.
6. **Fix fast.** Watch 404 errors and lost rankings for the first eight weeks.

> **The costly mistake.** A staging site's noindex tag left on after launch can remove a whole website from Google. Check it on launch day.

13

DIAGNOSE BEFORE YOU REACT

Traffic drops and Google updates

Every site sees drops. The worst response is to change everything at once. Diagnose first, then fix the real cause.

What Google tells site owners

- Google makes significant, broad core updates several times a year, plus smaller unannounced ones[16]
- Wait at least one full week after a core update finishes before analysing your site[16]
- Review 16 months of Performance data in Search Console to rule out seasonal patterns[17]
- Manual action reviews often take days or weeks; link-related reviews can take longer[18]

The seven common causes

Cause	Where to look
Algorithm or core update	Dates of the drop versus announced updates
Technical change	Recent releases, robots.txt, noindex, redirects
Site migration	Redirect map and 404 errors
Manual action or security issue	Search Console reports
Seasonality or lower demand	Year-on-year data and Google Trends
New SERP features or AI Overviews	Impressions steady but clicks down
Tracking error	Search Console and analytics disagree

> **Read the signal.** If impressions hold but clicks fall, the cause is often AI Overviews or new result features, not a ranking problem. Improve titles, snippets and brand demand rather than rewriting everything.

14

REPORTS THAT DRIVE DECISIONS

Measuring SEO

SEO reporting should answer one question: is search bringing more of the right customers? Rankings and traffic are signals; leads and revenue are the result.

The tools you need

Tool	Use it for
Google Search Console	Queries, clicks, indexing and technical issues
Google Analytics 4	Sessions, conversions and revenue by landing page; set data retention to 14 months[23]
Data Studio (formerly Looker Studio)	Dashboards that combine sources; Google reintroduced the Data Studio name in April 2026[24]
Rank tracker	Positions for priority keywords and competitors
AI visibility tracking	How often AI tools mention and cite your brand

Your monthly SEO scorecard

Metric	Last month	This month	Change
Organic leads or sales			
Organic clicks (Search Console)			
Impressions			
Keywords in top 10			
Indexed priority pages			
AI tools mentioning you (of 4)			

AI referrals in GA4. Create a custom channel group for referrers such as chatgpt.com, perplexity.ai, gemini.google.com and copilot.microsoft.com, so AI traffic gets its own line in your reports.

15

FROM PLAN TO PROGRESS

Your 90-day SEO plan

SEO compounds. The businesses that win are the ones that do the basics consistently. Use this plan to get the first 90 days right.

Days 1 to 30: Fix the foundations

- [x] Connect Search Console and GA4; set retention to 14 months
- [x] Run the technical checklist and fix indexing blockers
- [x] Build your keyword map: one page per intent
- [x] Find and fix keyword cannibalisation
- [x] Add Organization and BreadcrumbList structured data
- [x] Test five buyer questions in four AI tools and record results

Days 31 to 60: Improve what can win

- [x] Refresh ten pages ranking in positions 5 to 15
- [x] Rewrite key service or category pages with answer-first copy and proof
- [x] Publish four new pages for high-value keyword groups
- [x] Strengthen internal links to priority pages
- [x] Complete your Google Business Profile and start a review routine

Days 61 to 90: Build authority

- [x] Publish one original data piece or expert guide worth citing
- [x] Pitch five journalists, podcasts or industry sites
- [x] Reclaim unlinked brand mentions
- [x] Get listed on the sites AI tools cite in your category
- [x] Review results, repeat the AI test and set the next 90-day goals

> **Weekly hour.** Block one hour every week: 20 minutes in Search Console, 20 minutes improving one page and 20 minutes on links or mentions.

16

SAVE MONTHS OF WASTED WORK

15 SEO mistakes to avoid in 2027

Most SEO problems we see are not advanced. They are basic mistakes repeated for years. Check your site against this list.

#	Mistake	Fix
1	Targeting keywords nobody searches	Validate demand before writing
2	Several pages for the same keyword	One page per intent; merge duplicates
3	Leaving a noindex tag after launch	Check every template on launch day
4	Blocking AI search crawlers by accident	Review robots.txt and firewall rules
5	Thin category or service pages	Add helpful copy, proof and FAQs
6	Copying supplier or competitor content	Write original, experience-based copy
7	No author, date or sources	Show who wrote it and where facts come from
8	Buying links	Earn links with data, PR and partnerships
9	Redesigns without a redirect map	Map every old URL to its new home
10	Ignoring mobile speed	Optimise images, scripts and layout shift
11	Inconsistent business details	Same name, address and phone everywhere
12	Ignoring reviews	Ask, reply and keep them coming
13	Panicking after every update	Wait a week, then diagnose with data
14	Reporting rankings, not revenue	Track leads and sales from organic search
15	Treating AI search as separate from SEO	Build one strategy that serves both

Score yourself. Give one point for every mistake you are not making. Under 12? Start with the fixes nearest the top of the table; they usually pay back fastest.

17

PRINT THIS PAGE

The SEO master checklist

Technical

- [ ] Key pages indexed and in the sitemap
- [ ] No important pages blocked
- [ ] One canonical URL per page
- [ ] Fast and stable on mobile
- [ ] Content visible in HTML
- [ ] No redirect chains
- [ ] AI search crawlers allowed

Keywords

- [ ] Keyword map with one page per intent
- [ ] No cannibalisation
- [ ] Long-tail buyer terms covered

On-page

- [ ] Unique title and meta description
- [ ] One clear H1
- [ ] Answer in the first 60 words
- [ ] Author, date and sources shown
- [ ] Internal links to related pages

Authority

- [ ] New links and mentions each month
- [ ] No bought links
- [ ] Listed on sites AI tools cite

AI search

- [ ] Facts consistent everywhere
- [ ] FAQ and answer-first pages
- [ ] AI visibility tested monthly

Local and ecommerce

- [ ] Google Business Profile complete
- [ ] Reviews answered
- [ ] Category pages with copy
- [ ] Facets controlled
- [ ] Valid Product structured data

Measurement

- [ ] Search Console and GA4 connected
- [ ] GA4 retention at 14 months
- [ ] AI referral channel group
- [ ] Monthly SEO scorecard

18

PLAIN-ENGLISH DEFINITIONS

SEO glossary

AEO

Answer engine optimisation: structuring content so answer engines quote it as the direct answer.

AI Overviews and AI Mode

Google's AI-generated answers in search results, with links to sources.

Anchor text

The clickable words in a link, which tell search engines what the linked page is about.

Backlink

A link from another website to yours.

Canonical tag

Code that tells search engines which version of similar pages is the main one.

Core update

A broad change to Google's ranking systems, made several times a year.

Crawling

How search engines discover pages by following links and sitemaps.

E-E-A-T

Experience, expertise, authoritativeness and trust: signals of content quality.

Faceted navigation

Filters on category pages, such as size or colour, that can create many URLs.

GEO

Generative engine optimisation: improving how often AI tools mention and recommend your brand.

Indexing

When a search engine stores a page so it can appear in results.

Keyword cannibalisation

Two of your pages targeting the same search and competing with each other.

Noindex

A tag that tells search engines not to include a page in results.

Redirect (301)

A permanent move from one URL to another.

Search intent

What a searcher wants: to learn, compare, buy or find a place.

Structured data

Code that labels page content so machines understand it.

19

WORK WITH MANDEEP

About the author and next steps

Mandeep Singh Chahal is a digital marketing expert and the founder and CEO of SEO Discovery, which he started in Mohali, India, in 2004.

Over 22+ years in search he has grown the company into a 400+ person in-house team that runs SEO, AI search, paid ads and social media for businesses in more than 20 countries, from local service companies to brands such as ACKO, Mercedes-Benz, Toyota and ELLE. He is a member of the Forbes Agency Council, and SEO Discovery is a Google Partner and Meta Business Partner agency.

Selected results

Client	Result
ACKO (insurance, India)	Active users grew from 1.2M to 2.5M (+108%)
Chokhi Dhani (hospitality, Dubai)	+937.5% organic traffic and #1 for 400+ local keywords
Venom Motorsports (automotive, USA)	Organic traffic from 100K to 490K (+390%)

Results from published SEO Discovery case studies. See all case studies at mandeepchahal.me/results/.
